

Romil Modi

Software Engineer

✉ modiromil2809@gmail.com ☎ [9104497370](tel:9104497370) 📍 Ahmedabad, Gujarat 🌐 [Portfolio](#) 🔗 [Linkedin](#)

Summary	Software Engineer with 1+ years of professional experience designing and building scalable backend systems, RESTful & GraphQL APIs, and real-time applications. Proficient in Node.js, TypeScript, NestJS, Python, and Django, with hands-on experience using MongoDB, PostgreSQL, Redis, Docker, and AWS. Proven ability to integrate third-party services including Stripe, QuickBooks, and Firebase, and to architect production-ready systems with clean, maintainable code. Fast learner who thrives in fast-paced environments and is open to any Software Engineer role.				
---------	---	--	--	--	--

Education	Silver Oak University Computer Engineering	B.Tech • 9.7 2021 - 2025
-----------	---	-----------------------------

Experience	Moon Technolabs Junior Software Engineer	Ahmedabad, India • Full-time Oct 2025 – Present
	- Developed and maintained RESTful and GraphQL APIs using Node.js, Express.js, and NestJS for production-grade applications. - Integrated Stripe payment billing, QuickBooks accounting synchronization, and Firebase push notifications into backend services. - Managed data across MongoDB, PostgreSQL, and MySQL; implemented Redis caching and session management for performance optimization. - Built JWT-based authentication and Role-Based Access Control (RBAC) for multi-role platforms with Super Admin, Admin, and User tiers. - Developed WebSocket infrastructure for real-time messaging and live operational data updates. - Collaborated with cross-functional teams in Agile sprints to consistently deliver features on schedule.	
	Moon Technolabs Software Engineer Apprentice	Ahmedabad, India • Apprenticeship Jun 2025 – Sep 2025
	- Built backend modules and REST APIs using Node.js, TypeScript, SQL, and MongoDB. - Explored and implemented Redis for caching and PostgreSQL with Sequelize ORM for relational data modeling. - Applied best practices in API design, error handling, and participated actively in code reviews. - Rapidly acquired new backend technologies in a fast-paced production environment.	
	Exposys Data Labs Cyber Security Intern	Bengaluru, India • Remote Jun 2023 – Jul 2023
	- Built Cipher Guard — a Python/Tkinter desktop application for text encryption and decryption using classical cipher techniques. - Studied cryptographic fundamentals, data protection methods, and security threat analysis as part of the internship curriculum.

Projects

Ops Map

Tech Stack: Node.js, Express.js, MongoDB, JWT, Stripe, WebSockets, RBAC

SaaS-based operational mapping platform with real-time alerts, zone management, and field mission tracking.

- Designed scalable RESTful APIs with modules for threats, messaging, alerts, and field missions; architected for modular scalability and high performance.
- Implemented JWT authentication and RBAC for Super Admin, Web Admin, and Operator roles with full admin control panel for user management and activity logs.
- Integrated Stripe subscription billing and built WebSocket-based real-time messaging and alert media library infrastructure.

Keicho

Tech Stack: Node.js, PostgreSQL, JWT, QuickBooks, Firebase, AWS S3, WebSockets

Role-based payroll platform for managing jobs, shifts, clients, and fully automated payroll workflows.

- Built RESTful backend APIs with JWT auth and RBAC for Super Admin, Supervisor, and Worker roles managing payroll entities and locations.
- Implemented automated payroll workflows including timesheets, pay runs, and payslip generation using accurate rule-based calculations with real-time WebSocket updates.
- Integrated QuickBooks synchronization, Firebase push notifications, and secure document storage using AWS S3.

FinCred

Tech Stack: Node.js, Express.js, MongoDB, JWT, Docker, AWS

Scalable fintech backend platform with personal finance management and shared expense (SplitMate) modules.

- Architected REST APIs with JWT authentication, user-level data isolation, and structured business logic for personal finance and expense splitting.
- Implemented financial history analysis and deployed the system using Docker and AWS for production readiness.

Anomaly Detection System

Tech Stack: Django, MongoDB, JWT, OpenCV, LSTM, LRCN, RNN-CNN

AI-powered video surveillance backend with deep learning models for automated real-time anomaly detection.

- Built scalable Django backend with JWT authentication, RBAC, and RESTful APIs for controlled system access.
- Integrated deep learning models (LSTM, LRCN, RNN-CNN) with OpenCV-based video processing for real-time automated detection workflows.
